MOTOR EXTENSION KIT

(Patent Pending)

Making it possible to use EDFC ACTIVE / EDFC on vehicle models that are not compatible as-is!

Motor Extension Kit uses the exclusively designed flexible shaft to allow EDFC ACTIVE / EDFC motor (hereinafter, "Motor") to be installed at different position away from the top part of shock absorber. With this kit, EDFC ACTIVE / EDFC can be used on more vehicle models that have no sufficient space around piston rod top.

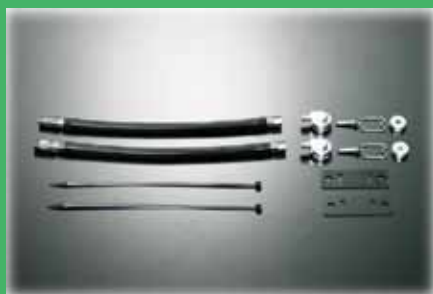

Greater Flexibility in Positioning of Motor

Extension is 300mm in length and rotates freely, making it possible to put Motor at more flexible location than ever.

Easy Installation

Installation process can be done with the shock absorber fitted onto the vehicle. Remove damping force adjustment knob and hex bolt then attach the extension kit. That is all there is to it. No special skill nor tool is required.

Exclusive Motor Bracket

Specially-designed motor bracket included in the kit makes it easy to anchor the Motor to the vehicle.

*Do NOT bend the extension shaft beyond the bending angle of R240mm. If bent further, Motor might operate unstably and/or malfunction.

*Attaching the Motor to the vehicle body panel etc. might cause the motor operating sound to amplify and/or reverberate inside the vehicle.

Contents of Kit

Extension Assembly x 2, Motor Bracket x 2, Cable Tie x 2 & Instruction Manual

MSRP JPY6,000/kit (JPY6,300 incl. tax)

Piston Rod Top Extension for EDFC / EDFC ACTIVE

This extension kit makes it possible to use EDFC / EDFC ACTIVE on 86 (ZN6) and BRZ (ZC6). Also, EDFC / EDFC ACTIVE can be used on Forester (SH5/9) by adding the Motor Extension Kit and this Piston Rod Top Extension. Please refer to the compatibility chart on the reverse side for details.

This kit can also be produced to the desired length upon request to fit other vehicle models. Please ask for details.

Contents of Kit Piston Rod Top Extension x2 & ADJ Rod x 2

MSRP JPY7,000/kit (JPY7,350 incl. tax)
